

If you have a question about the Terraclean service, these may help answer them for you

What is TerraClean?

TerraClean is a service available via the UK network of approved service centres and mobile operators.

A TerraClean service will remove carbon and other lacquers which build up in your engine, thus Restoring vehicle efficiency, improving MPG and reducing harmful emissions.

What do TerraClean service agents actually do ?

A Service agent will link your vehicle to one of our TerraClean machines (either Petrol or Diesel). The machine will take over as the fuel supply for the vehicle and use a highly refined, none harmful fuel coupled with the patented technology of the equipment to remove the build up of carbon from your vehicle.

Is TerraClean any better than the pour-in I have been using for years ?

Yes. TerraClean is unique in the system of cleaning. It is not just about the chemistry, it uses patented technology. TerraClean cleans from Injectors through the combustion process and cleans post combustion too. Thus cleaning EGR & Diesel Particulate Filters.

Can you TerraClean any vehicle ?

Yes, we do almost all vehicles. From a Motorcycle, Car, Van, HGV, Bus and marine engines. There are a few exceptions which we can not do, but your local service agent will confirm when you arrange to book your vehicle in. We have TerraCleaned, commuter motorbikes, family cars, Ferraris, Trucks, Passenger Buses and boats with both outboard and inboard engines.

“Terraclean Service works to maintain your vehicle, helps us take care of our environment and saves £££’s off your fuel bills” Edd China, Wheeler Dealers

My vehicle runs on LPG can it be TerraCleaned?

Yes. Most cars operating on LPG ran as petrol vehicles before conversion, and build up carbon deposits during that period. A TerraClean will remove those deposits. LPG does not create much carbon so a further service is not usually required

I drive a Hybrid, does it need a TerraClean ?

Yes. Hybrid technology and vehicles which use Stop-Go systems to save fuel are inherently prone to carbon build up and will generally develop more carbon deposits than other vehicles with similar mileage.

How often do I need to have my vehicle TerraCleaned ?

It is recommended you should have your vehicle TerraCleaned every 15,000 miles.

What can I do on a routine basis to reduce carbon build up ?

Use of a good quality fuel will help reduce formation of some of the deposits, but the fact is that carbon build up is a natural by product of the combustion process and carbon will therefore naturally develop in a vehicle and build up until removed.

Regain Performance

Restore MPG

Reduce Emissions

Will TerraClean damage my Nikasil Seals ?

We have TerraCleaned many vehicles with Nikasil (Nickel Silicon Carbide) liners. These are found on several brands such as Jaguar, Audi & BMW & current Porsche 911s. TerraCleaned will not cause any damage to the Nikasil coating. We are only using a highly refined fuel, there are no harmful chemicals present .

Can a TerraClean service damage my vehicle ?

The simple answer is "no". A TerraClean service is using a highly refined fuel which can cause no harm to your vehicle or any of its components. A TerraClean service will remove carbon which has built up over time from your vehicle, as well as other contaminants (tars & lacquers) which build up and deteriorate the performance of your vehicle. TerraClean is not a "fix" for a problem, it is a highly effective preventative maintenance service which will help prevent problems occurring, prolong
