

Terraclean is an advanced cleaning system that gives amazing results every time!

Why Clean the Fuel System of a Diesel Engine?

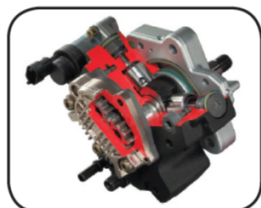

Carbon deposits inside the combustion chamber can affect the performance of your vehicle, and your fuel injectors will also be affected by deposits, reducing fuel economy.

Keep Your Car Properly Decarbonised!

Proper vehicle maintenance should never be overlooked. Keeping your engine properly decarbonised can improve fuel economy by 4 - 15%. Terraclean is designed to remove carbon from combustion chambers and injectors to safely restore horsepower, lower opacity and restore MPG in diesel engines.

So what does Terraclean do and how does it benefit me?

Terraclean is an advanced cleaning system that requires unique patented machinery and chemicals that connect to the vehicle using high quality OEM specific adaptors. The Terraclean machine takes over as the vehicles fuel tank and fuel pump. The process enables cleaning of internal engine components without dismantling the engine! The majority of carbon, tars and varnishes are removed from; fuel injectors, injection pumps, combustion chambers, valves, manifolds and oxygen sensors. Terraclean can also prevent EGR and turbo vane related problems when used as a preventative measure.*

Cleans and lubricates the fuel pump which in turn extends component life.

Removes carbon build up from the combustion chamber, this results in a more efficient burn.

Cleans the fuel injectors so the spray pattern is restored which gives back lost fuel economy.

*Once every 10,000 miles or once a year whichever comes first.
